

HEALTHY VOLUNTEERS NEEDED

We are looking for healthy volunteers for a medical research study who:

- Are aged 18 or over
- Consider themselves in good health
- Do not smoke cigarettes (including on any occasion in the past year)
- Do not currently use e-cigarettes
- Do not take any regular medications
 - There are exceptions including contraceptives, skin creams, and certain regular medications. If you are interested, we can provide further information.

This is an innovative and exciting study into lung health and immunity.

Participation would involve two visits to the RVI or Freeman hospital on consecutive days. The first visit involves screening and a blood test. The second visit would be for a camera examination of your lungs called a bronchoscopy, for which you would spend a few hours in the hospital.

Participants will be paid a fee to compensate for time and inconvenience.
