

This leaflet tells you about the North East England and North Cumbria diabetes registry for children and young people.

What is the North East England and North Cumbria diabetes registry?

The registry lists the details of children and young people aged less than 18 years of age that live in North East England or North Cumbria and are diagnosed with diabetes.

What are the aims of the registry?

- ◆ To collect information on all children and young people aged less than 18 years of age when they were diagnosed with diabetes and living in North East England and North Cumbria.
- ◆ To keep the information up-to-date.
- ◆ To use this information to make sure that the best quality care and treatment is given to patients with diabetes.
- ◆ To use the information for research purposes. The research will investigate the causes of diabetes and work towards identifying risk factors, both environmental and genetic.

What are we asking of you?

We are asking for your consent to collect and store your child's medical and personal details within the registry database.

What are the benefits for you and your child?

Giving your consent would allow us to use your child's data for diabetes research and to help plan diabetes healthcare services. Thus, the registry will help provide the best treatment for people with diabetes and may ultimately lead to finding a cure.

What information do we need?

Upon consent, we collect both medical and personal information from your child's hospital notes. The personal information includes: NHS number; addresses and postcodes; date of birth, sex and ethnic group.

The medical information includes details of your child's diabetes diagnosis, for example, diabetes type, date of diagnosis and whether insulin treatment was necessary. We will also collect clinical results, for example, blood sugar levels/ ketones/acidosis and other results such as HbA1cs/cholesterol/triglycerides.

What happens if you do not give your consent?

We will not collect your child's personal information, but we will keep a record that a person of their sex and age was diagnosed with diabetes in your area, and the date when this diagnosis was made. This is important as it makes sure we know about the kind of people who get diabetes in your area.

How do we ensure the data is kept accurate and up-to-date?

We will make sure the information we hold is as accurate and as up-to-date as possible. We will do this by cross checking our records with information held by the NHS and the General Register Office. The General Register Office is a national organisation that provides health information for the whole of England and Wales.

How do we ensure confidentiality?

All information is kept under conditions of strict security as required by law in the Data Protection Act (2018). No personal information is ever released to unauthorised individuals, groups or companies. A Data Advisory Group act as guardians of the information and monitor the security, release and use of data.

To protect your interests all research in the NHS is looked at by an independent group of people called a Research Ethics Committee. This registry has been approved by Newcastle & North Tyneside 1 Research Ethics Committee.

Who will have access to the data?

A restricted number of staff working on the registry will have access to the data about your child.

All registry staff have been trained in confidentiality procedures to ensure that your child's data are protected at all times.

Can you have access to the data?

Yes. You have a right to see all the data that is held about you and your child.

Are the data passed on to anyone?

Yes, sometimes anonymous data that cannot identify any individuals is given to other researchers. Sometimes personal data is given to approved outside researchers but information is only released under very strict security and only with the permission of the Data Advisory group.

What if you do not want your child to be registered?

No personal details will be put on the computer without your consent if your child is under 16 years old. You do not have to give a reason if you do decide to say no.

What happens if you give your consent now and then change your mind in the future?

It is possible to withdraw permission for registration at any time either by contacting us directly or informing your hospital consultant or GP who will contact us. All of your child's personally identifiable details will be permanently removed from the registry.

Your child's medical care will NOT be affected if you decide not to take part in the registry.

How can I find out more about diabetes?

Contact Diabetes UK (previously called the British Diabetic Association, BDA)

Diabetes UK Central Office

Macleod House
10 Parkway
London
NW1 7AA

TEL: 020 7424 1000
