Create the Future of Ageing with Us

UN demographers project the global population will reach 9 billion by 2050, with the over 60s reaching 2.1 billion. 66 per cent of the world's population will live in urban areas and almost two thirds of the world's older people will be living in Asia. This massive demographic transition has long-term implications for all nations - economic, political, social and environmental. It also presents unprecedented opportunities for radically reframing our thinking about ageing across the life course.

Voice  - **Valuing Our Intellectual Capital and Experience** - is hosted at the UK National Innovation Centre for Ageing.

Our aim is to engage with citizens from across the globe in debate about population ageing and harness our collective experience and insights about what is needed and possible. Together we work with governments, communities, academia and industry to co-develop innovative solutions to sustainably meet the challenges and opportunities presented by demographic change.

Join Us. Share your insights and ideas.
