Abstract Text:

Background: Growing numbers of interventions are being developed to support families living with dementia, but the extent to which they address the issues of most importance to people living with dementia and their carers is unclear. The aim of this review is to synthesise the best available qualitative evidence on the outcomes valued by (a) people living with dementia and (b) their carers, both for themselves and each other. This review is a part of a wider project aiming to improve post diagnostic support for people living with dementia and their carers.

Method: We will use thematic synthesis methodology. Studies from 1990 onwards will be eligible if they include qualitative data on the views of people living with dementia or their carers on valued outcomes or the lived experience of dementia. Databases to be searched include MEDLINE, CINAHL, PsycInfo and Social Sciences Premium Collection, in addition to systematically gathered grey literature. Rayyan QCRI software will be used to manage the screening processes and NVivo software will be used to manage data extraction and analysis. The review will also critically evaluate the extent to which international recommendations address the areas of importance to people living with dementia and their families.

Results: The results of this review will be presented at the conference.

Conclusion: The findings will be of relevance to researchers, policy makers, and providers and commissioners of dementia services.

Title:

Outcomes valued by people living with dementia and their carers: a qualitative systematic review with a qualitative synthesis

Submitter's E-mail Address:

laura.booi@newcastle.ac.uk

Electronic Signature:

Laura Booi

Preferred Presentation Format:

Oral Presentation Preferred, but will do Poster Presentation if so assigned

Was this research funded by an Alzheimer's Association grant?

No

Abstract Submission Affirmations:

I agree to the Abstract Submission Affirmations.

Do you plan to upload figures or tables to supplement your abstract text?

No

Theme:

Dementia Care and Psychosocial Factors

Topic:

Psychosocial Factors and Environmental Design

Sub Topic:

Living with dementia and quality of life

Learning Objectives:

Describe the outcomes valued by people living with dementia and the carers of people living with dementia.

Distinguish whether and how interventions address outcomes valued by people living with dementia and their carers

Keywords:

qualitative methods, quality of care and quality of life

Fellowship:

No.

If necessary, you can make changes to your abstract/proposal submission

To access your submission in the future, use the direct link to your abstract/proposal submission from one of the automatic confirmation emails that were sent to you during the submission.

Or point your browser to </alz/reminder.cgi> to have that URL mailed to you again. Your username/password are 53795/639335.

Any changes that you make will be reflected instantly in what is seen by the reviewers. You DO NOT need to go through all of the submission steps in order to change one thing. If you want to change the title, for example, just click "Title" in the abstract/proposal control panel and submit the new title.

When you have completed your submission, you may close this browser window.
